Stage 2: AI readiness roadmap

FluidOne
CSA Cyber

| | STAGE 2 OF 4 | | |

STEP 1

Identify your data approach

Consider the data architecture that best suits your AI use case and your goals; a data lakehouse is the gold-standard for AI but this won't be the case for every business and solution.

🔍 What data do you need to support your AI use case?

Create a unified data source

Whether you're combining existing repositories or building something new, your AI needs a single, coherent pool of data. Make sure it's structured and formatted in a way your AI platform can understand.
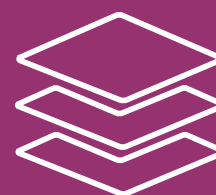

STEP 2

🔍 Where does your data live and what would it take to bring it together?

STEP 3

Develop data security measures

Security and governance are just as critical as infrastructure. Define access policies for sensitive data and ensure your new environment is integrated into your broader cyber defences.

🔍 What sensitive information could AI surface and how do you protect it?

Get support for Stage 2

📄 **Data & BI Services**
Get a clear view of your data, plan the right infrastructure, and deploy it smoothly.

📓 **AI Governance & Policies**
Delivered by CSA Cyber, we'll help you identify and close gaps in your security and governance.
