

# Stage 3: AI pilot roadmap

STAGE 3 OF 4

**STEP 1****Deliver AI for a key use case**

Target a critical workflow or user group where AI can deliver measurable impact. Use pre-deployment benchmarks, like hours spent on a task, to track ROI and build the case for wider rollout.

How do you evidence success to support a full-scale rollout?

**Develop your solution**

With your pilot live, look for opportunities to optimise and refine. Capture lessons learned and close gaps before scaling to ensure your full deployment delivers value from day one.

**STEP 2**

What's working well and what needs refining before you scale?

**STEP 3****Put your security to the test**

A pilot is the safest place to uncover vulnerabilities. By running thorough security tests and documenting any issues at this stage, they can be resolved before full deployment.

What tactics will you employ to ensure rigorous security testing?

for Stage 3

**Red Teaming**

Launch a simulated attack to uncover and fix vulnerabilities in your AI pilot.

**Expanding automation**

Identify other use cases for simpler automation alongside your AI deployment.
